

# CITIES BEYOND CITY

## 2<sup>nd</sup> International Conference on Urban and Regional Planning

One of the major impacts of the Industrial Revolution is the rapid urbanization in the world. It is believed that as this century moves forward the global process of urbanization grows unprecedentedly high; anticipating 90 percent of the world's population to live in urban environment (mega-cities, cities, or small towns) in next few decades. Continents like Asia are the major contributors of such phenomenon of rapid urbanization. On one hand, the steep population growth curve in the third world is reaching a point when it pushes us to start developing strategies for how to contain further urban sprawl and to discourage the establishment of new urban communities and on the other hand, the trend of leap frog urban development at a massive scale at the edge of cities triggers the developers to create 'cities beyond city'.

27th April, 2018 (2:00 pm onward)  
28th April, 2018 (9:00 am onward)  
City Campus, NED University  
Molana Din Mohammad Wafai Road  
Karachi
